

nova class profiset startech

Four complete machines lines for the advanced joinery

All "Made in SCM Italy"
From casting iron to finished product.

Come see our production plants and touch the quality of SCM
machines; you will be our guest.

nova class profiset startech lines

The widest range of machines
for the advanced joinery

SCM's objective is to guarantee customers high quality technologies which meet their requirements in such a way as to make SCM the partner for any needs.

Saw Unit
sturdy structure

Sliding Carriage
high cutting quality

Rip Fence
smoothness and precision

Essential configuration with complete equipment to carry out professional machining.

circular saws operating groups

sturdy structure

Saw unit

The saw blade lifting is carried out by a strong cast-iron structure with sliding on ground round slideways which guarantee the **best accuracy**. The unit tilting is carried out on cast-iron rotation sectors in a crescent shape to ensure reliability over time.

always user friendly and precise

Handwheels on the machine front

Ease of use in every day operation due to the dedicated gear box (**SCM solution**), fully protected from dust, that provides a smooth and direct transmission. Every minimum handwheel movement corresponds to a precise blade adjustment.

perfect cut

Saw unit

Maximum torsional rigidity and the total absence of vibration through the closed loop structure of the saw unit which ensures **perfect alignment of the blades** during tilted and difficult cuts.

simple and effective

Manual adjustment of the scoring unit

Vertical and horizontal adjustments are carried out by user-friendly mechanical levers that operate directly making **precise and smooth movements**. The useful mechanical stops allows immediately finding of the set position. The positioning of the controls allows their use without moving from the front of the machine.

maximum cut quality guaranteed over time

Sliding carriage

The carriage will never require adjustment due to its closed reticular geometry with steel guides using an **exclusive method of mechanical fixing**.

Furthermore the **“arc” profile of the class arch-ground steel slideways (SCM Solution)** ensures:

- No play and loads four times higher than others
- +/-0,05 mm tolerance on the entire carriage length for straight and high quality cutting
- Sliding effectiveness over time, thanks to the particular guides positioning which ensures protection from dust

smooth, rapid and precise positioning

Rip fence

Sliding of the rip fence support on round bar with micrometric adjustment. The support can be also equipped with digital readout for fence position with detecting system on magnetic band (option). The fence can be easily excluded from the working area when it isn't used.

optimal support

Squaring frame and fence

Panel loading is easy on the large squaring frame with an idle roller at the end and the mobile cross beams offer an **optimal support** also to smaller panels. The telescopic squaring fence with the inclined metric scale and two reversible stops can be used to square panels measuring 3200 x 3800 mm and for tilted cuts at up to 45° on both sides of the frame.

class

nova

programmable circular saws electronic controls

the operating advantage
for easy assistance

Easy

Maximum reliability due to the function pushbuttons and easy-to-use with the electronic control of up to 5 axes with the 7" LCD display, 16:9 format. Integrated and fast control of all dedicated functions.

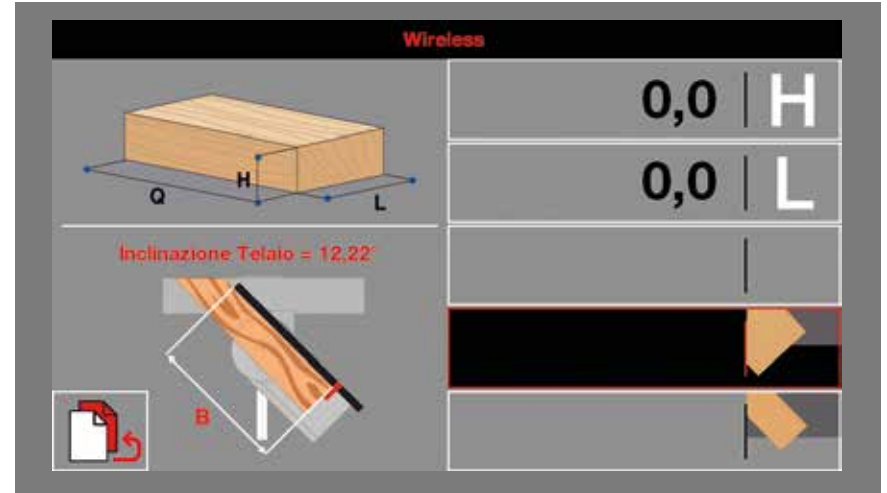

These features translate into immediate improvements in productivity and guarantees the capability of the full potential of the machine.

one cut only, the correct on

Operator's support

The large display suggests to the operator information for the correct use of any cutting configuration. In particular it displays in real time the correct position of the stop on the basis of the known measurements of the work piece (**SCM Solution**).

the practical advantage for
automatic control of the main
positions

Ready

The **programming** of the work becomes **simple and effective** with the electronic control with a 4" LCD display.

- Working mode: manual, semi-automatic and automatic with a memory capacity of up to 99 programs.
- Tool data setting with automatic height adjustment.
- Calculator and hour counter.

Saw unit lifting

Saw unit tilting

Programmable rip fence (option)

Blade speed readout

Easy control can easily manage the **inverter for the adjustment of the saw blade rotation speed and the scoring unit alignment** (option).

maximum practicality
Pushbuttons integrated in the carriage
 The possibility to start or stop the blades motors from the pushbuttons located at the ends of the carriage **considerably helps when machining large dimensioned panels.**
(option)

speed and precision
Motorised programmable rip fence mounted on a recirculating ball screw mechanism with sliding on linear guides.
Only for Ready 3 Plus / Easy 3 Plus versions

practicality and safety
Motorized programmable rip fence with steel cable and sliding on sturdy round steel bar.
 Position readout on magnetic band.
Only for Ready 3 versions

circular saws main optional devices

Angular cutting devices

Available for the following versions

- a) traditional
- b) with automatic self-adjustment of the stops position in respect of the blade
- c) with automatic self-adjustment of the stops position in respect of the blade and electronic readouts for stop position and rule tilting angle

Rip fence unit

The exclusive referencing system for the first trim cut allows the setting of trim quantity to be cut for every side **without any test cuts**.

Available also with electronic readouts.

Squaring frame with "Complex" device

with automatic self-adjustment of stops position in respect of the blade and rule tilting angle. Furthermore, thanks to the dedicated frame structure, it is possible to carry out **tilted cuts keeping the squaring rule comfortably within the operator's reach**, both in acute cuts and in obtuse ones, without renouncing to a valid support of the piece.

Fence for complementary cutting

Device to be applied directly on the squaring rule that allows to quickly carry out cuts with angles complementary to the rule one.

Electronic readouts on the squaring stops
The stops can be easily read even from distance.

speed and precision
"Quick Lock" fence with rapid release.

Minimum set up time with the **SCM system that allows rapid fence positioning.** The extending roller and the stronger frame support maximise performance.

circular saws main optional devices

Overhead blade protection
For totally safe machining.

Surface reinforcement treatment
For sliding table and mobile crossbars of squaring frame.
Dedicated to the intensive processing and particularly
abrasive materials.

Mechanical preset for "DADO" machining
Possibility of using a tool (not included)
to replace the main blade, with 203 mm
maximum diameter and 20 mm
maximum thickness.

"Pro-Lock"
"Pro-Lock" system for the main blade rapid locking
with fast and tool-less riving knife adjustment.

Expandable scoring blade
Manually expandable with variable thickness from
2,8 to 3,6 mm. 120 mm blade diameter.

Pneumatic presser

Particularly suitable for the cutting of thin materials.

Second extension with sliding rail support
to safely support panels for large dimension and weight.

Advance materials machining

PVC and other plastic materials. Nylon, polycarbonate and other synthetic materials. Corian and other composite materials. Aluminium, brass and other light metals.

Device for the blade micro-lubrication

Compulsory for the machining of light alloys, extremely useful with particular plastic materials.

Feeding on Connecting Rods
constant precision

Thickening Table
rigidity and precision

Surface Fence
high rigidity

Easy and rapid to use with great performance in a limited space.

planers operating units

absolute rigidity

Surface fence

High rigid fence with a smooth movement thanks to the **central locking on round bar**. The graduated scale facilitates the operator in positioning the guide to the required tilting.

a guarantee of perfect planarity

Simultaneous raising of the work tables

The system allows the **changeover from planer to thicknesser** with a single movement ensuring working rapidity and precision.

constant precision over time

Feeding on connecting rods

Very accurate machining with the movement of the infeed table by means of a parallelogram **kinetic mechanism** which **always gives the same distance between the cutterblock and the table**. The system operating directly on the connecting rods avoids any exertion to the table assuring constant planarity over time.

concave-convex function

Perfect joints every time

The available settings allow **perfect bonding** of the components giving excellent coupling and eliminating any joint line. (class)

perfect finish

Feeding rollers on connecting rods

The stopping of the work piece and the presence of notches on its surface are eliminated due to the movement system on all three rollers, that allows their vertical displacement by rotation and the **best linear feeding**. Perfect surfaces and high feeding performance with the standard rubber rollers.

Easy and rapid in use

SCM cutterblock

The cutter block is made from a single block of steel ensuring complete stability even under heavy dynamic loads.

one machine for every requirement

Interchangeable rollers

Perfect finish obtained by quick and easy changeover of the rollers that allows the operator to configure the machine drive function in case of special requirements, such as a minimum removal of fine wood and/or batches where multiple pieces of different thicknesses are processed.

(Third powered for nova thickening planers available as option).

Powered work table lifting with micrometric adjustment.
(With digital readout for class planers)

Feed speed controlled by inverter from control panel and dedicated warning light to indicate to higher speed.
(class)

The 4 screws with a large diameter combined with the 2 side linear guides ensure worktable stability. The integrated protections guarantee high precision and reliability over time.

Pneumatic load adjustment on the rollers for the best finish and effectiveness of the feeding of any material and in any working condition.
(Option for class thickening planers)

planers main optional devices

“Xylent” spiralknife cutterblock

The 3 spiralknives give an exceptional finish. **Reduced noise** during machining provides a more comfortable working environment. It also improves the dust extraction due to the **production of very small chips**. Each cutter has 4 tips which can be rotated into the cutting position when worn. Therefore increasing the production life of the cutter block **before knives** require replacement.

Maintenance case for “Xylent” spiralknife

Complete with:

- 1 cleaning/degreasing liquid bottle for the resins cleaning
- 1 set dynamometric key
- 2 bit Torx
- 10 inserts
- 5 screws
- 1 brass bristle brush to clean the spindle with mounted in inserts
- 1 steel bristle brush to clean the inserts housings

“Tersa” monoblock cutterblock

The cutter block is made from a single block of steel ensuring complete stability even under heavy dynamic loads. Automatic knives clamping by means of the centrifugal force ensures safe and precise machining. The system, without fixing screws, makes knives substitution extremely fast.

Additional overturning fence

Integrated in the surface fence, it ensures perfect operator safety when machining small dimensioned work pieces.

“Smart Lifter” integrated protection

The protection system, **developed by SCM**, is perfectly integrated into the machine base for **maximum protection** while excluding any hindrance or obstruction in the work. The protection with automatic vertical, horizontal and tilted movements **provides complete coverage of the tool** before, during and after machining.

Cast-iron mortiser
Drilling holes and mortises are easily carried out. Complete with exhaust hood, 120 mm diameter and 16 mm chuck.

Outfeed rollers in sandblasted steel
For a perfect post-processing finish.

Special rollers
The sectioned steel roller (a) and the dual-density rubber roller (b) allow the simultaneous processing of different thicknesses giving great results even with minimum removal. With the dual-density rubber roller, the edges are not damaged even when the work pieces are not perfectly aligned. Suitable also for upgraded woods and/or thin thicknesses.

a

Work table extension
A single operator can easily move very long panels or introduce a second one without going to the outside to stop the first one.

Thickening table with idle rollers
It enables the feeding of moist and/or resinous wood. Particularly suitable for heavy duty woodworking operations and with rough work pieces.

Spindle Moulder Unit
sturdiness and
versatility

Spindle Moulder Fence
set-up rapidity

Machine Versions
specialisation and
professionalism

Precision and reliability in unbeatable time.

spindle moulders operating units

easy-to-use

Adjustable spindle moulder fence.

A handle provides the setting-up of the infeed table, which effects the removal and it is verified by an index on a metric scale.

sturdiness and versatility

Spindle moulder unit

Maximum stability and rigidity in all working conditions, thanks to a **large spindle moulder column made entirely of cast iron**. The spindle is surrounded by a cast iron "cup" to protect the internal mechanical components from shavings and sawdust. The 5 standard speed (4 speed for nova ti 105 and tf 100) are ideal for any type of machining, from moulding to routing and tenoning, with the possibility to fit large diameter tools.

the best support for the work table

"Fast" sectional table

Provides support for the work piece being machined close to the tool, allowing the adjustment with mounted tools and the very best quality finish when machining narrow pieces. The extremes in machinable material eliminate the disadvantages of a possible collision with the tool.

a

b

maximum set-up speed and ease-of-use
Spindle moulder fence with mechanical programming
 No more test runs due to digital readouts (a) that ensure accuracy to a tenth of a millimetre in positioning the two worktables. The side handles (b) make it easy to remove and reposition the fence from the work table.

immediately in the correct position
"Flex" spindle moulder fence

A single, simple movement to retract and re-position instantly and accurately the position of the fence on the worktable with such precision that no other control is necessary.

automatic and removable
"Flex One" spindle moulder fence

Automatic adjustment of the entire fence according to the tool diameter. User-friendly worktable exclusion system with precise re-positioning.

machining with tools on the spindle head carried out with the "Flex" fence

The spindle moulder fence can be located behind the tool allowing the performance of "head" routing using small diameter tools, typical of a router or portable electric tools; all this in compliance with CE safety regulations.

engraving,
 grooving,
 mortising

spindle moulders machine versions

Versions with front sliding carriage
Designed to manage tenoning and moulding operations very easily.

The nova ti 105 "version with front sliding carriage" can be equipped with **tenoning table and tenoning hood** in order to house tools, 320 mm max. diameter (300 mm USA/ Canada).

For the profiling of very large work pieces, the nova ti 105 can be equipped with a **support frame complete with two reversible stops**.

"LL" versions with work table side extensions
Ideal when machining very long work pieces due to worktable extensions.
The mobile front bar makes it easy to move large dimensioned workpieces on the worktable, particularly for edge moulding.

"TL PRO-10" versions

The manual feed carriage is a cast iron structure running on linear slideways with recirculating ball screws, guaranteeing maximum machining precision and stability.

"TL" versions
Top machining precision and stability due to the manual feed carriage with cast-iron structure mounted on axial bearings running on slideways made from hardened and ground bar.

The "PRO-10" tenoning table can be retracted easily and within a few seconds to leave the machine ready for moulding (a) or contouring (b) operations.

For a total safety and a higher flexibility, the machine is supplied, as standard feature, with a **special protection hood for contouring operations**.

Carriage on work table for small tenoning jobs

Ideal for tenoning of small work pieces for the versions without sliding carriage. Mitre cuts with angles of $\pm 60^\circ$ on the worktable are possible. Easy fitting and removal due to the fixing system on the worktable.

spindle moulders electronic controls

"Easy"

Maximum reliability and **easy-to-use** due to the function push buttons with the electronic control of up to 8 axes with the 7" LCD display, 16:9 format. Integrated and fast control of all dedicated functions. These features translate into immediate improvements in productivity and guarantees the capability and the full potential of the machine.

"Ready"

The programming of the work becomes simple and effective with the electronic control with a 4" LCD colour screen. Working mode: manual, semi-automatic and automatic with a memory capacity of up to 99 programs.

Tool-holder shaft lifting

Adjustment of the entire profiling fence

Tool-holder shaft tilting

Tool-holder shaft speed readout

For the most recurring machining jobs it is possible to set the dimensions of the required profile and select the tool to be used. The controls will create the dedicated program to carry out the require machining operations.

Powered movement with digital readouts. Maximum precision and ease of use.

"Easy" control can easily manage the inverter for the adjustment of spindle rotation speed. (option).

spindle moulders other optional devices

Feeder support
High usable flexibility and no use of worktable space, due to the cross device on the column support of the overhead control panel. The positions are made extremely simple using handwheels with digital readout.

"T-SET" rapid tool locking
A simple compressed air gun allows the tools locking and unlocking when the interchangeable spindle is present.

Advanced materials machining
PVC and other plastic materials. Nylon, polycarbonate and other synthetic materials.

Drilling Head
effective

Elements Production
versatility

"Easy Motion"
easy loading

The universal drilling machine for
woodworking shops and craftsmen.

startech cn operating groups

effective Drilling head

With 7 independent vertical spindles, the spindle and the blade in "X" and the possibility to drill in "Y", startech cn has a **drilling head flexible and ideal for batch-one furniture productions**. The drilling head positioned above the panel allows a precise machining which can be verified in the panel assembly phase: in fact the system uses the outside of the panel as a reference and thus **any differences in thickness are on the inside of the cabinet**. Furthermore the positioning of the drilling head always **upper the working chips and dust** grants a better cleaning and a reduced maintenance.

Easy panels movement "Easy Motion" work table

Easy loading and sliding of panels due to the front and rear support rollers. The right and left guides and the central side-alignment device facilitate accurate machining utilizing the 2 stops arrangement similar to that used on high end CNC's.

easy and intuitive Numerical control

NC control with 7" colour touch-screen display and self-diagnosis and signaling system of errors or damages. Head tooling and machining cycle programming without using any mouse or keyboard and with automatic optimization.

Finished furniture elements can be produced without having to adjust the bits and with no operator's intervention for the worktable and machine set-up according to the panels dimensions.

Maestro suite

Expand your creativity

“Maestro” Software by SCM Group startech cn has the possibility to import and export the rilling programs, even when created with a CAD/CAM software in the office, through USB key (N.B. Post-processor not included). Furthermore the “Maestro” software by SCM allows to create projects and geometrical drawings to be automatically converted in drilling programs for the machine.

startech cn dimensions and technical data

Bar code reader

With a simple “click” of the barcode reader (option), it is very rapid and simple to recall drilling program, correctly stored in the machine control. Optimal device to integrate the startech cn inside the “Netline” panel working cells.

(*profiset 60ep and profiset 60*)

top flexibility Universal spindle

When the machine is equipped with the optional universal spindle it is possible to work the piece at 360°, thus obtaining even the most particular profiles, otherwise not obtainable with the other operating groups.
(*profiset 60ep and profiset 60*)

some examples

setting-up speed

“Set-up”

The **SCM solution** allows a simple and rapid set up when changing tools as it has the minimum tool diameter as only reference. It is enough a **single adjustment to position all elements** (tool, working height, front and rear pressers, feeding rollers) and no idle retooling times.
(*profiset 60ep and profiset 60*)

profiset operating groups

working programming becomes simple and effective

“Ready” electronic control

- Automatic positioning control of left vertical spindle and top horizontal spindle
- Feed speed selection
- Mode: manual, semi-automatic and automatic with memory capacity up to 99 programs.
- Additional functions: calculator and hour counter (*profiset 40ep*)

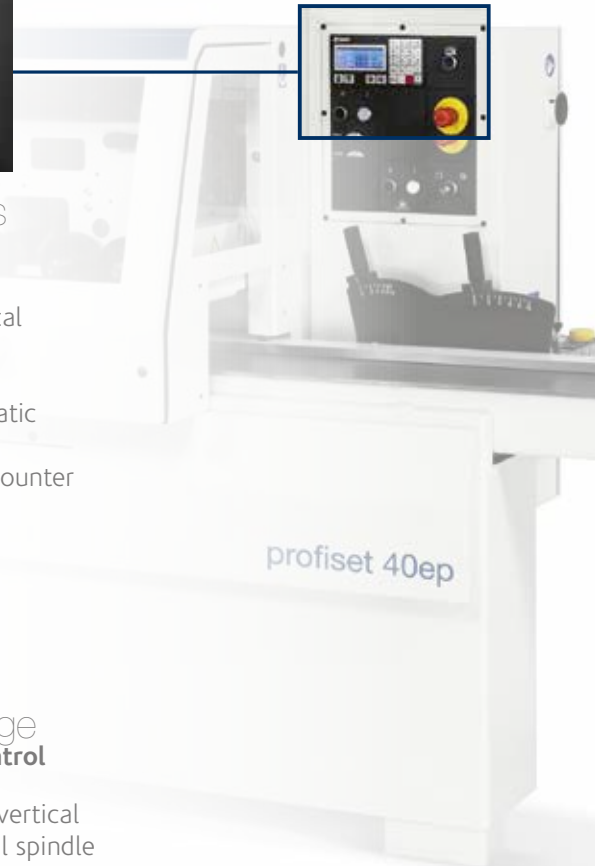

operational advantage “Easy Plus” electronic control from control panel

- Automatic control of left vertical spindle and upper horizontal spindle positioning.
- Feed speed selection
- 7" LCD colour display; 16:9 resolution
- Tools database with visualisation of tools picture
- Programs database with visualisation of tools picture and position (*profiset 60ep*)

profiset dimensions and technical

high performance available as standard

Profiling

The vertical spindles allow a profiling capacity of up to 40 mm and an axial adjustment of 40 mm to manage more profiles. (*profiset 60ep and profiset 60*)

ease-of-use and safety

Feed Belt
precise and effective

Saw Blade Shaft Sleeve
rapidity and effectiveness

Practical, accurate,
reliable and above all safe.

class m 3 operating groups

ease of use and safety

Anti-kickback finger barriers

The SCM multiblade rip saw is equipped with 4 anti-kickback finger barriers: three top and one bottom and a chip deflector screen between the three top barriers.

precise and reliable

Feed belt

The class m3 has an extremely substantial feed belt which is directly driven through its robust belt links. Unwanted movement of saw blade shaft sleeve is prevented by the aggressive surface of the feed belt and the 4 pressure rollers (2 in front and 2 behind the blades). These advanced features ensure maximum straightening and excellent cutting quality, minimizing the quantity of stock removal in successive machining.

practical and easy to use

Set up

Setting up operations can be carried out rapidly: the adjustment of spindle, pressure rollers and feed speed is carried out by hand wheels according to graduated scale and direct reading. The infeed fence is fitted with self-locking lever which can be operated single-handed. The centralized control panel is equipped with ammeter to enable operator to obtain maximum output without motor stress.

quick and effective

Saw blade shaft sleeve

It can be quickly fitted into spindle and easily locked with a special key. The conical coupling of the saw blade shaft sleeve with the base of spindle ensures longer blade life and higher output.

Laser

Laser beam cutting line reference.

Some typical uses:

- extraction of irregular planks, without using fences
- selection of clear parts of planks with knots and fissures (option).

ISO 40 System
rapid set up

Circular Saw Unit
maximum effectiveness

Dedicated Devices
productivity and flexibility

Rapidity and precision: machine always ready to be used.

class ten 220 operating units

Rapid set-up

Machine set-up

Thanks to a **rapid tool-change with ISO 40** as used on the CNC machining centres it is possible to obtain:

- tools always ready on the relevant shafts, in the tool holder on machine board
- in few seconds tools adjusted and ready to be used

Simple adjustment

Revolver

The tenon depth is adjusted through the practical 5-position revolver positioned on the circular saw unit. With the revolver positioned on the work piece support table it is possible the correct table positioning with reference to the tool diameter.

6-positions
tool holder on
machine board

perfect tenoning operations

Thanks to the rotating chipbreaker with 5 turret stops, easy to be replaced.

SERVICE

SCM provides a service that goes beyond the purchase, to guarantee the long term performance of your technological production system and peace of mind for your business.

A COMPLETE RANGE OF AFTER-SALES SERVICES

- installation and start-up of machines, cells, lines and systems
- tailored training programs
- telephone support to reduce times and costs when machines are not working
- preventive maintenance programs to guarantee long term performance
- complete renovation of machines and plants to renew the added value of the investments
- custom upgrading to update machines and plants and meet new production requirements

 **scmservice**

SPARE PARTS

SCM Group can count on 140 spare parts professionals worldwide to meet any request with real time shipments.

36,000 SPARE PARTS

Our spare parts inventory, with a value of 12 million euros, covers every single machine

SPARE PARTS GUARANTEED

We guarantee also hard to find parts, with 3,5 million euros invested in "critical" spare parts.

IMMEDIATE AVAILABILITY

Over 90% of orders received are carried out the same day thanks to the huge inventory available.

6 BRANCHES AROUND THE WORLD

The spare parts service can count on worldwide support (Rimini, Singapore, Shenzhen, Moscow, Atlanta, São Bento do Sul)

500 SHIPMENTS A DAY

THE STRONGEST WOOD TECHNOLOGIES ARE IN OUR DNA

SCM. A HERITAGE OF SKILLS IN A UNIQUE BRAND

Over 65 years of success gives SCM the centre stage in woodworking technology. This heritage results from bringing together the best know-how in machining and systems for wood-based manufacturing. SCM is present all over the world, brought to you by the widest distribution network in the industry.

65 years history

3 main production sites in Italy

300.000 square metres of production space

17.000 machines manufactured per year

90% export

20 foreign branches

350 agents and dealers

500 support technicians

500 registered patents

In SCM's DNA also strength and solidity of a great Group. The SCM Group is a world leader, manufacturing industrial equipment and components for machining the widest range of materials.

SCM GROUP, A HIGHLY SKILLED TEAM EXPERT IN INDUSTRIAL MACHINES AND COMPONENTS

INDUSTRIAL MACHINERY

Stand-alone machines, integrated systems and services dedicated to processing a wide range of materials.

WOODWORKING TECHNOLOGIES

TECHNOLOGIES FOR PROCESSING COMPOSITE MATERIALS, ALUMINIUM, PLASTIC, GLASS, STONE, METAL

INDUSTRIAL COMPONENTS

Technological components for the Group's machines and systems, for those of third-parties and the machinery industry.
